

2020 Collection

Welcome to

We seek to supply the highest quality digital technologies available and are constantly reviewing the range to ensure that it meets the latest requirements for style, design, elegance and functionality.

We understand and value the ever-changing demands of our customers and we aim to ensure that they always remain ahead of the market trends, as well as offering products at the cutting edge of style.

Our products combine: classic British styling with contemporary cutting edge product design from Europe which also recognises the eclectic elegance of Asia.

Cutting edge features

Combining superior function and exquisite design engineering, our Aquaform digital range is intelligent showering at it's best. Packed with unique cutting edge features making showering highly responsive and convenient. Aquaform digital shower valves boast cool touch, easy divert and automatic safety shut down features. The latest technology allows outlet options and temperature to be changed simultaneously.

Aquaform digital shower valves can be installed both inside and outside of the showering area. Additional touches such as being able to operate prior to entering helps to create a luxurious showering experience.

Intuitive illumination

Intuitive coloured LED lights change depending on the set temperature. This visual cue makes showering simple & safe, letting you know when the water is getting hotter and cooling down.

The control handle also features a stylish arrow indicator that not only shows the temperature position but acts as an aid during showering, providing greater control and ensuring each action is as seamless as possible.

Safety first

Once you have selected your desired temperature it will remain unchanged through-out the duration of your shower, preventing risks of scalding or sudden temperature spikes.

Easy to use

We have meticulously considered each aspect of the showering experience to ensure our Aquaform digital shower valves make your routine effortless.

WRAS approved

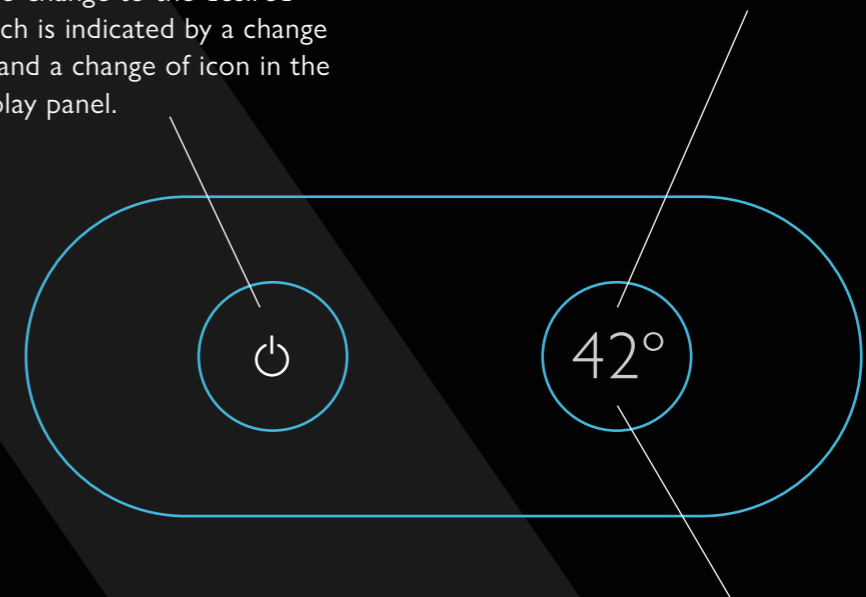

Our Aquaform digital processor is WRAS Approved, it has been tested and is fully compliant with the requirements of Water Supply Regulations and Scottish Byelaws.

Easy divert

Aquaform digital shower valves have a diverter function for up to 4 outlets, providing the maximum showering flexibility. Changing between outlets is easy with icons clearly indicating your selection.

Control dial

Flow is activated by pressing the Control Dial. Once the system is turned on, simply turn the dial to change the desired temperature. Coloured LED lights glow like a halo around the Control Dial to indicate the set temperature. At the required temperature you can then press again and hold to change to the desired outlet which is indicated by a change of colour and a change of icon in the digital display panel.

Cool touch

Our sophisticated shower controls and trim plates are kept completely separate from the water in the valve, ensuring they are always safe and cool to touch. Unlike bar valves or other exposed traditional thermostatic valves, you can not be scalded by any of our exposed components.

Automatic safety shut down

If the water or power supply fails, the shower will turn off completely for your safety. This enhanced safety feature gives you complete reassurance.

LCD digital display

Our innovative easy to read digital display accurately outputs the precise temperature and selected outlet. Simple, clear and highly responsive.

Please note:

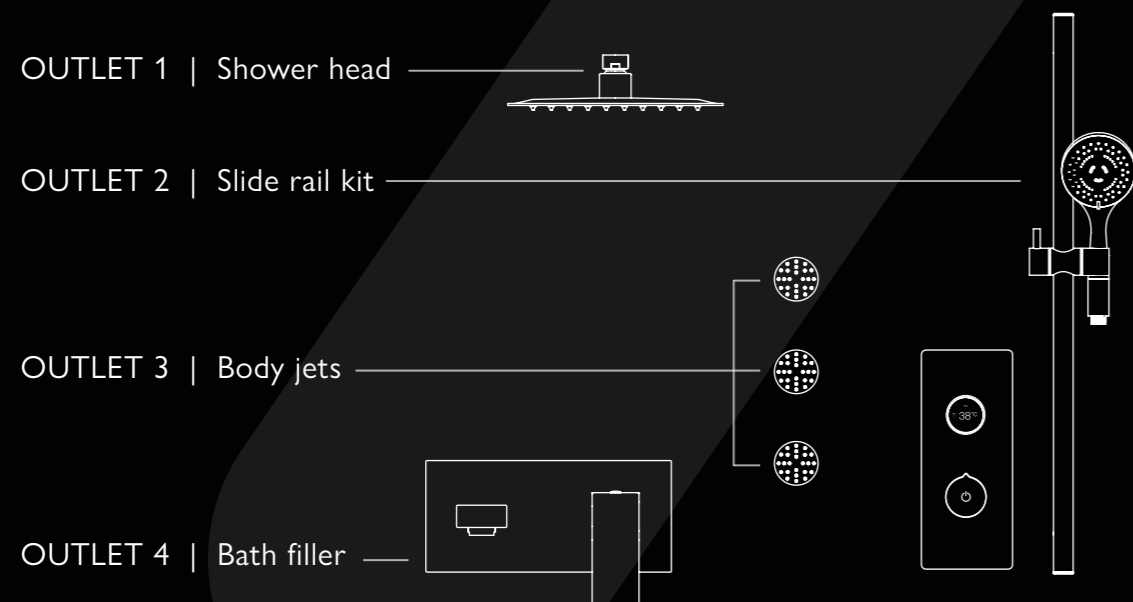

Whilst every endeavour has been taken to ensure the accuracy of information and imagery within this catalogue at the time of going to print, the range is dynamic and constantly being developed to meet changing market requirements. The product ranges shown are subject to change and/or availability. E&OE.

Single outlet engine/valve explained

The single outlet engine/valve is the main element of the digital shower, it is the power source from mains electricity supply, it also controls the hot water and cold water inlet to the shower and controls the temperature of the mixed water output. This engine takes the information from the main user interface/controls on the trim plate which the customer uses during each interaction with the shower. This can be used as a totally stand alone engine/valve and supply mixed controlled water to either external shower kits and accessories, or can be combined directly with the multi outlet mixing valve.

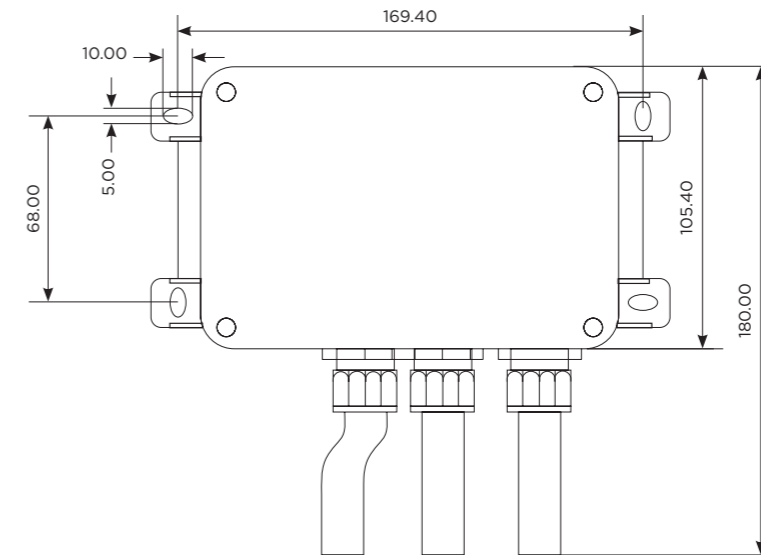

Multi outlet mixing valve explained

This valve has the mixing functions for up to 4 outlets allowing you to programme the valve to suit your lifestyle and individual showering needs. Our valves also have the additional feature of being able to block the outlets at source if they are not required.

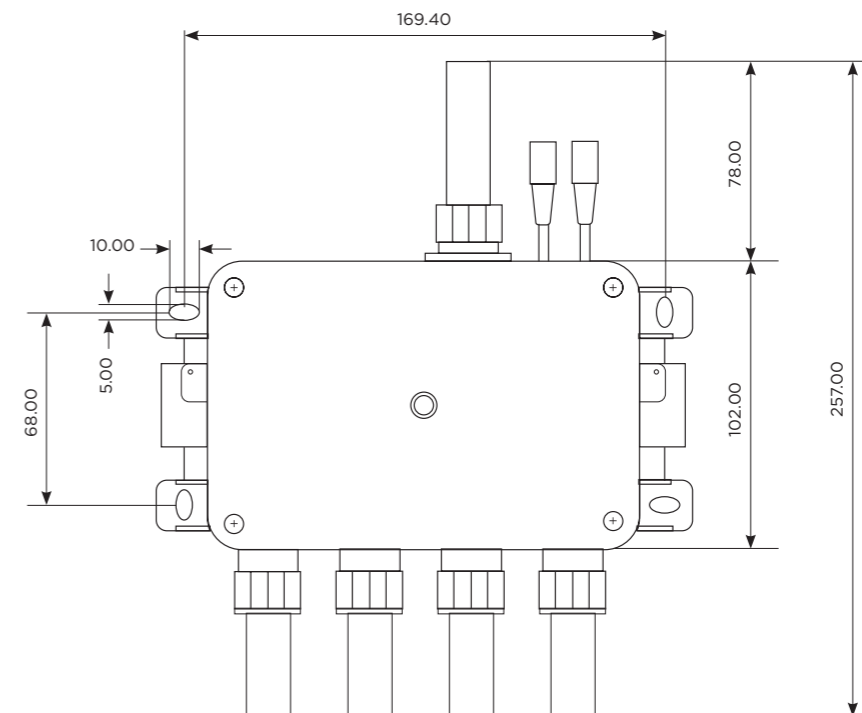

Body jets have the flexibility to be fitted individually or connected in sequence to create your desired effect

Control panel

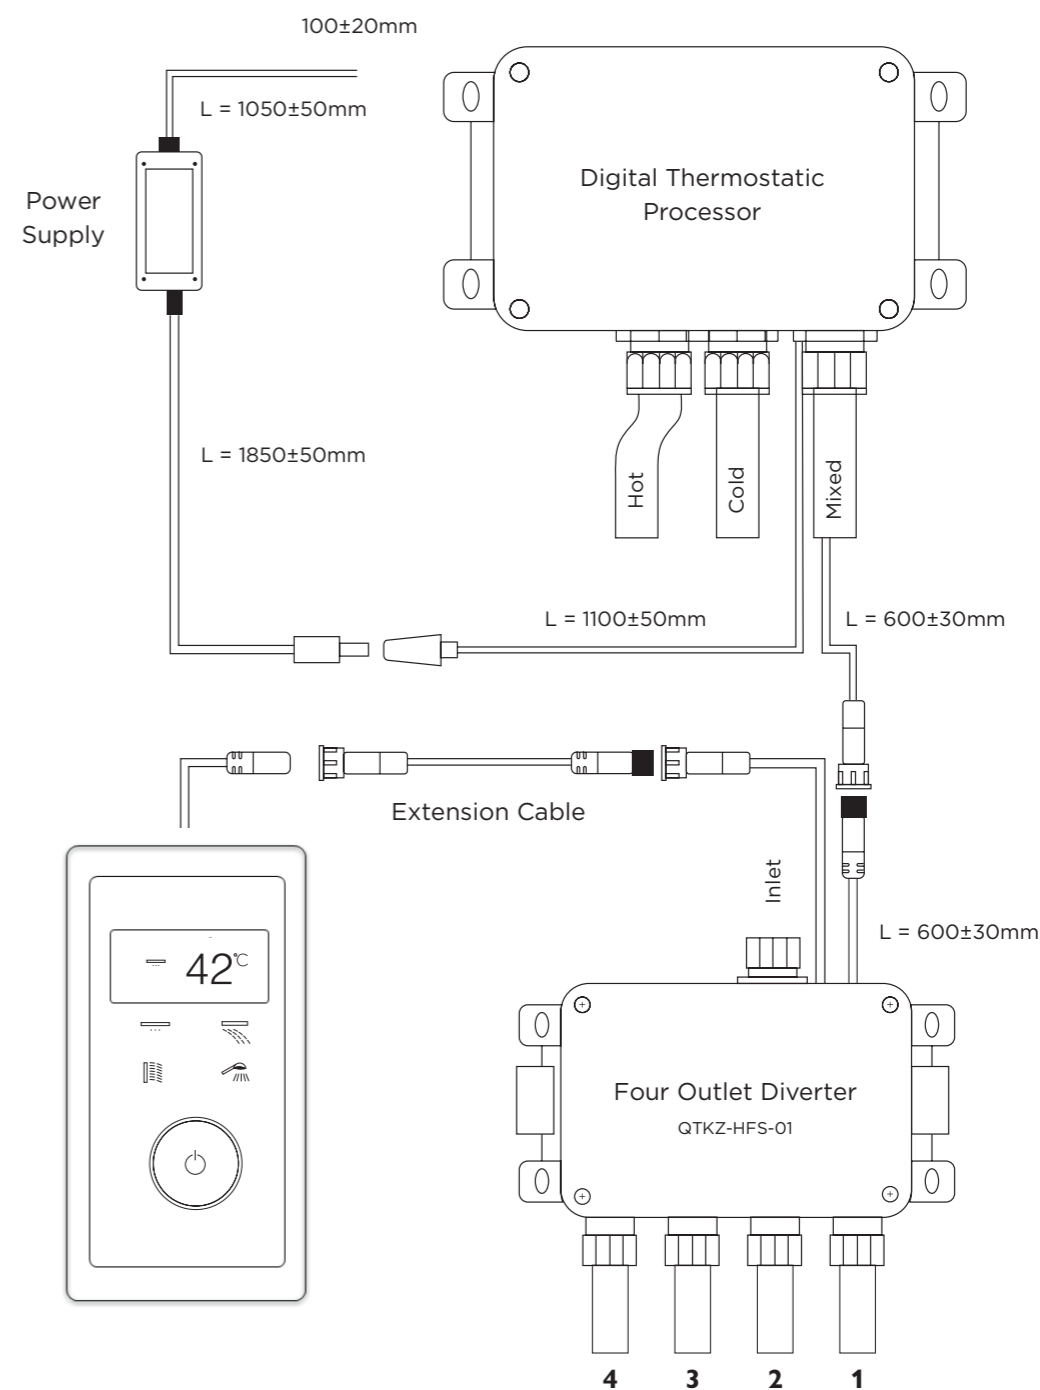

Flow output is activated by pressing the touch operated control panel icons.

Once the system is turned on, simply turn the dial to change the desired temperature. Coloured LED lights glow like a halo around the control dial to indicate the set temperature, which is shown in the display panel.

At the required temperature you can then press any icon for the desired outlet which is indicated by a change of icon colour and a change of icon in the digital display panel.
